1.89B

EDGE REQUESTS SERVED

Why this quarter matters

ACTIVE STUDENTS

499K

A large engaged learner base in one quarter.

NEW STUDENTS

631K

Top of funnel is still expanding beyond the active base.

ENGAGEMENT

14m 34s

High-intent usage rather than low-value browsing.

Investor takeaway

- ASG Shop is not just attracting visits; it is sustaining deep study behavior, with 54.3 million tracked events and nearly 15 minutes of average engagement per active student.
- Growth quality looks strong. More than 80% of first-touch acquisition came from direct and organic channels, indicating brand pull and efficient demand generation.
- The product is serving national scale already, with 1.13 PB of bandwidth and 1.89 billion requests delivered in Q1 while maintaining cache hit rates above 91%.
- Content concentration around flagship programs creates visible monetization and brand leverage, especially around FRB-26 and broader HSC preparation pathways.

What this report is designed to prove

- There is already meaningful demand at national scale.
- Learner behavior suggests trust, habit and repeat usage.
- Core infrastructure can absorb very large spikes efficiently.
- The business has the foundations for investor-backed acceleration.

Important note

This deck uses operating and usage metrics already present in the codebase. It is intentionally investor-facing, but it is not a financial statement or a valuation memo.

Platform adoption has reached visible scale

TRANSACTIONS

36K+

Commercial activity is already present on the platform.

TOTAL EVENTS

54.3M

Usage depth creates strong internal feedback loops.

EDGE BANDWIDTH

1.13 PB

Usage is heavy enough to stress real infrastructure.

Rolling 30-day active students

Returning vs new mix

How to read the quarter

- The active-student curve peaked near 250K in February and held much of that scale through the remainder of the quarter, ending above the January starting base.
- Returning users dominate most of the quarter, a useful sign that the product is building learning habits rather than one-time curiosity traffic.
- A 631K inflow of new students on top of a 499K active base implies continued market expansion rather than simple recycling of the same cohort.

ENGAGEMENT

Behavior suggests trust, utility and repeat learning

AVG ENGAGEMENT

14m 34s

874 seconds per active student in the quarter.

PEAK DAU/MAU

19.8%

Healthy short-cycle habit formation at peak.

PEAK WAU/MAU

50.5%

Usage remains relevant through the week.

First-touch acquisition mix

Top student cities

Why investors should care

- Direct plus organic search account for 82.8% of acquisition, which lowers dependence on paid media and points to rising brand authority.
- Paid social still contributes a meaningful 13.0%, showing the team can layer performance marketing on top of organic demand rather than rely on it.
- Geographic concentration in Bangladesh's major cities suggests a strong domestic wedge before broader regional expansion.
- The combination of strong flagship content and efficient acquisition is exactly the kind of base from which category leaders often compound.

What this quarter supports in an investor discussion

A concise investor narrative

- ASG Shop appears to have already crossed the hardest early hurdle: proving that a large learner base will repeatedly use the product for serious study, not just sample it.
- The flagship content ecosystem is strong enough to pull millions of views, while the acquisition mix suggests that trust and brand memory are doing much of the heavy lifting.
- Infrastructure is not hypothetical. The team is already supporting internet-scale traffic patterns with disciplined delivery performance.
- That combination creates a credible case for growth capital focused on product expansion, distribution and monetization acceleration.

DEMAND

82.8%

Of acquisition comes from direct plus organic channels.

DEPTH

15.78M

Views on the lead flagship program in one quarter.

READINESS

253 ms

Best monthly origin response time in March.

Recommended use in the room

Use this document as a leave-behind after the live conversation. It is strongest when paired with a spoken founder story, current revenue details, and a clear funding ask tailored to the investor.
